SUBMERSIBLE VERTICAL ELECTRIC PUMPS

EQUIPPED WITH IE2, IE3 MOTORS (REG. (EU) 2019/1781)

**ErP 2009/125/EC**

## Directive 2009/125/EC of the European Union

The **Directive 2005/32/EC** on energy-using products (**EuP**) and the subsequent **Directive 2009/125/EC** on energy-related products (**ErP**) established the ecodesign requirements for products to reduce their energy consumption and consequently their environmental impact.

These requirements apply to products placed and used in the European Economic Area (European Union plus Iceland, Liechtenstein and Norway) as a stand-alone unit or as integrated parts in other products.

The table shows the Regulations that define the requirements for Lowara products::

| Product                        | Regulations   | From           | Target  |
|--------------------------------|---|----------------|---|
| Pumps*                         | (EU) N. 547/2012                                    | 1 January 2015 | <b>MEI</b> ≥ 0,4  |
| Circulators**                  | (EC) N. 641/2009, (EU) N. 622/2012 e (EU) 2019/1781 | 1 August 2015  | <b>EEl</b> < 0,23   |
| Electric motors                | (EU) 2019/1781 e 2021/341                           | 1 July 2021    | <b>IE2</b> : three-phase motors with a rated output ≥ 0,12 and < 0,749 kW<br><b>IE3</b> : three-phase motors with a rated output ≥ 0,75 and < 1000 kW |
| Variable speed drives (VSD)*** | (EU) 2019/1781 e 2021/341                           | 1 July 2021    | <b>IE2</b>  |

\* some types of pump, used for pumping clean water.

\*\* circulators with a rated hydraulic output power of between 1 and 2500 W, designed for use in heating systems or in secondary circuits of cooling distribution systems.

\*\*\* variable speed drives with three-phase input and rated output power from 0,12 kW up to 1000 kW, rated for operating with motor included in the same regulations.

From 1 July 2023 it will be introduced additional requirements.

## e-SVI SERIES

### VERTICAL MULTISTAGE ELECTRIC PUMP WITH SUBMERGED STEM

The e-SVI pump is a vertical axis multistage centrifugal pump with submerged stem for the suction of liquids inside tanks.

The e-SVI pump is available in several hydraulic sizes, with rated flow rates from 1 to 92 m<sup>3</sup>/h and a variable number of impeller alternatives, capable of dealing with a wide range of duty points. Moreover, it can also be configured by adding empty stages, so that the length of the submerged section may be modified to reach the desired suction depth.

The e-SVI pump is available in two versions:

- coupled with coupling with a standard motor (C and M, S and N version)
- compact version without coupling (E version; 1SVI, 3SVI and 5SVI models only).

The high efficiency hydraulic components, which ensure life savings during the whole life cycle, are designed for maximum reliability and, thanks to the 1 to 22 m<sup>3</sup>/h impeller design, to also reduce the axial load on the motor.

## SPECIFICATIONS

### PUMP

- **Delivery:** up to 120 m<sup>3</sup>/h.
- **Head:** up to 240 m.
- **Temperature** of pumped liquid (with standard mechanical seal):
  - from -10°C to +90°C for version with coupling (C, M, S, N)
  - from -10°C to +60°C for version with extended shaft (E)
- Maximum **operating pressure:**
  - PN 25 for version with coupling (C, M, N, S) (PN 16 for SVI 66 and 92 series)
  - PN10 for version with extended shaft (E)
- Hydraulic performance compliant with ISO 9906:2012 - Grade 3B (ex ISO 9906:1999 - Annex A).
- Direction of rotation: clockwise looking at the pump from the top down (marked with an arrow on the adapter and on the coupling).

### MOTOR

- Squirrel cage in short circuit, enclosed construction with external ventilation.
- Standard motor for versions with coupling (C, M, S, N)
- Extended shaft motor for the compact version (E)
- **IP55 protection.**
- **Class 155 (F) insulation.**
- Performances according to EN 60034-1.
- Standard voltage:
  - Single-phase version: 220-240 V, 50 Hz.
  - Three-phase version:
    - 220-240/380-415 V, 50 Hz, for power up to 3 kW
    - 380-415/660-690 V, 50 Hz, for power above 3 kW

## APPLICATIONS

- Cooling and lubricating circuits for tools (emulsions, cutting oil).
- Cooling systems (mixtures water-glycols in high quantity).
- Washing systems (mixtures water-detergents).

## CONSTRUCTION

The hydraulic components are in stainless steel, while the pump body with the discharge port is available in both AISI 316 stainless steel and cast iron.

The mechanical seal for 1 to 22 m<sup>3</sup>/h models with coupling can consist of either a strong cartridge construction (C version), or it can be traditional (M version for 1 to 22 m<sup>3</sup>/h models and higher). With motors with powers from 5.5 kW and higher, the traditional seal may be replaced without removing the motor from the pump.

Compact models with motor with extended shaft (version E) are supplied as standard with a chamber for the draining of significant liquid leaks inside the suction tank, caused by a break of the mechanical seal.

e-SVI pumps can be supplied with Hydrovar control system or e-SM drive, for the efficient management of the pump at variable speeds

## **e-SVI SERIES**

### **CHARACTERISTICS OF 1, 3, 5, 10, 15, 22SVI SERIES**

- The following versions are available:
    - C: version with coupling and cartridge mechanical seal.
    - E: version with extended shaft (1, 3, 5SVI only).
    - M: version with coupling and standard mechanical seal according to EN 12756 (ex DIN 24960) and ISO 3069 for 1, 3, 5SVI series and 10, 15, 22SVI series (up to 4 kW).
  - Possible choice of the following materials:
    - G: AISI 304 hydraulic components; cast iron body and discharge port.
    - N: AISI 316 hydraulic components, body and discharge port
  - Reduced axial thrusts enable the use of standard motors that are easily found in the market.
  - Liquid temperature between -30°C and +90°C, depending on the mechanical seal used.
  - Minimum liquid level at the suction 20 mm.
- 

### **CHARACTERISTICS OF SVI 33, 46, 66, 92 SERIES**

- Vertical pump with submersible body.
  - The following versions are available:
    - S: version with standard motor; impellers, diffusers, tie-rods, suction base and filter made entirely of stainless steel. Adapter and upper head in cast iron.
    - N: version with standard motor; made entirely of AISI 316 stainless steel.
  - Delivery port can be coupled to counter-flanges, according to EN 1092.
  - Balanced mechanical seal according to EN 12756 (ex DIN 24960) and ISO 3069, which can be replaced without removing the motor from the pump.
  - Standard version for liquid temperatures ranging from -10°C and +90°C.
- 

Inlet pressure of the pump plus static pressure of the water within the pump cannot exceed the nominal pressure (PN). Using different motors from those provided could limit inlet pressure. In this event please contact customer services.

---

### **AVAILABLE ON REQUEST**

Special versions are available to suit many applications.

- 4 poles version.
  - Special voltages.
  - Special materials for mechanical seals and gaskets.
  - Horizontal installation.
-

## **e-SVI SERIES TYPICAL APPLICATIONS**

Thanks to its flexibility and reliability, the e-SVI pump is suitable for use in several industrial applications, from machine tools to filtering systems, to process control, and similar, even outside the industrial sector. The pumps are suitable for handling clean fluids without abrasive substances or fibers.

### **APPLICATIONS**

- Cooling circuits and tool lubrication.
- Cooling systems
- Process temperature control
- Industrial washing systems (degreasing of mechanical components).
- Clean liquid pressure boosting.
- Transfer of condensation.
- Filtering systems.
- Washing and cleaning systems (washing of wells, cars and trucks).
- Electronic industrial sector circuit washing.
- Commercial washers.

### **PUMPED LIQUID**

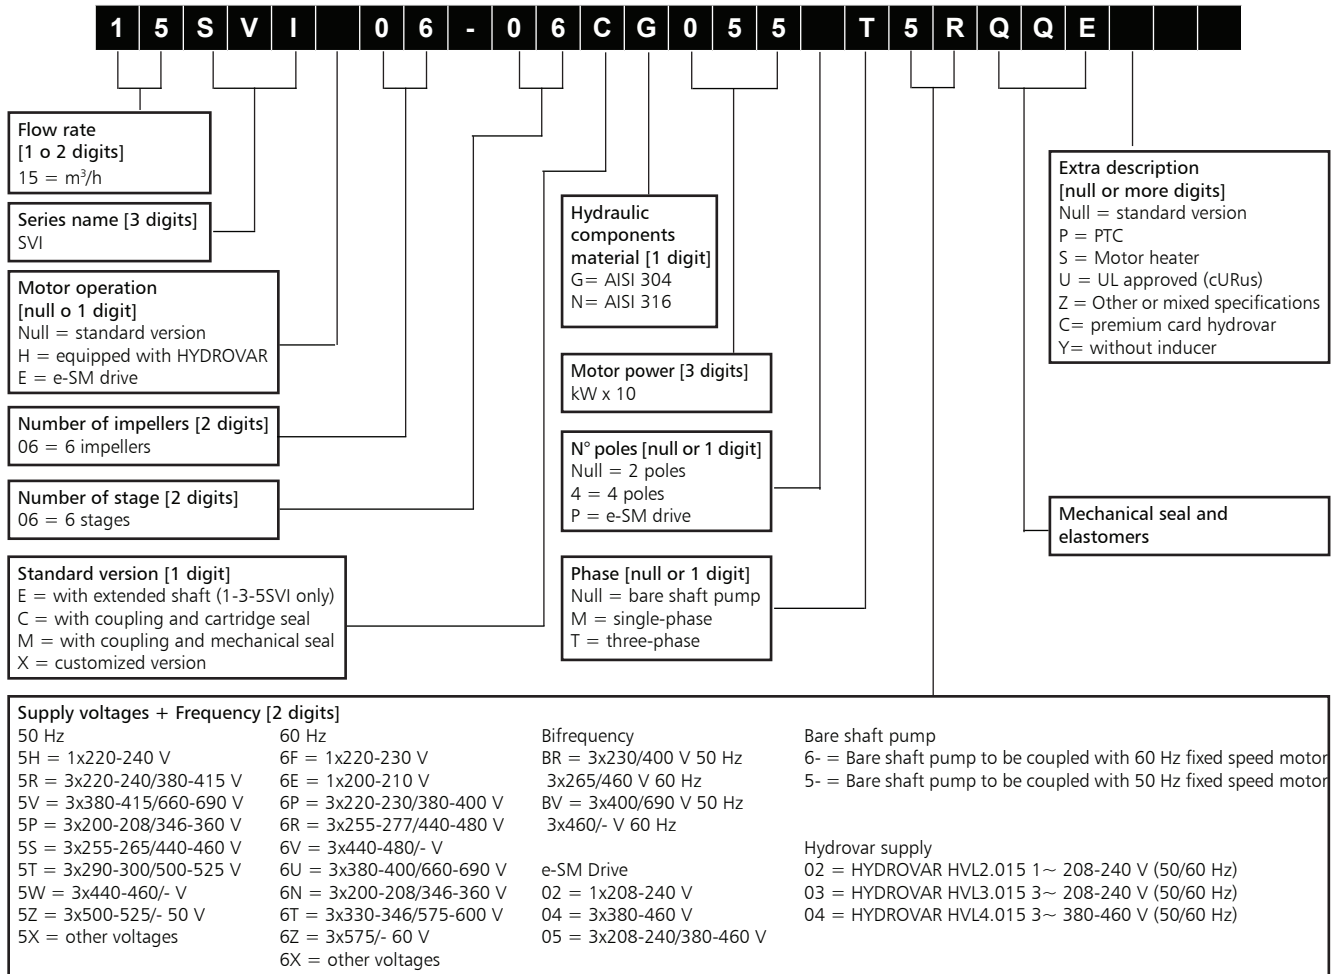

- Coolants.
- Emulsions.
- Cutting oil.
- Condensation.
- Mixtures water-detergents.
- Mixtures water-glycols.

## IDENTIFICATION CODE

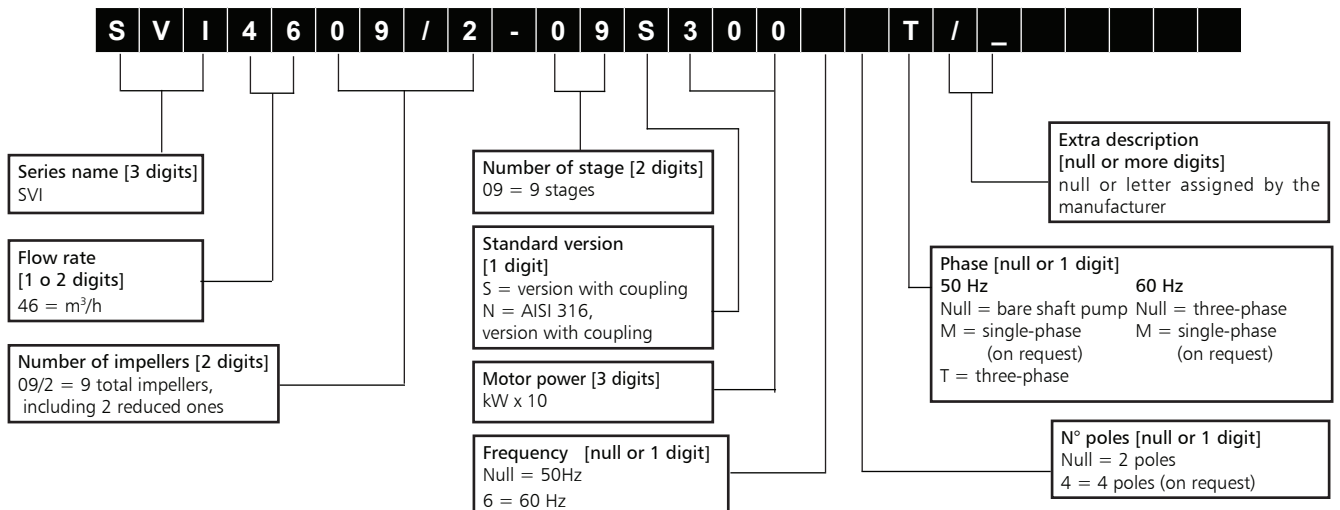

### 1, 3, 5, 10, 15, 22SVI SERIES

EXAMPLE : 15SVI06-06CG055T5RQQE

e-SVI series electric pump, nominal flow 15 m<sup>3</sup>/h, number of impellers 6, number of stages 6, C version with coupling and cartridge mechanical seal, made of AISI 304, motor power 5,5 kW, 2 pole three-phase 50 Hz version, supply voltage 3x220-240/380-415 V, SiC-SiC-EPDM mech. seal.

### SVI 33, 46, 66, 92 SERIES

EXAMPLE : SVI4609/2-09S300T

SVI Series Electric pump, flow rate 46 m<sup>3</sup>/h, number of impellers 9 including 2 reduced ones, number of stages 9, S version with coupling, rated motor power 30 kW, 50 Hz version, three-phase.

**COMPLETE PUMP PRESSURE / TEMPERATURE OPERATING LIMITS**

\* = PN16 limit for SVI 66 and SVI 92 series

## e-SVI SERIES MOTORS (ErP 2009/125/EC)

- Short-circuit squirrel-cage motor, enclosed construction with external ventilation (TEFC).
- **IP 55** protection degree.
- Insulation class **155 (F)**.
- Electrical performances according to EN 60034-1.
- **Supplied three-phase surface motors with IE2 efficiency level for power < 0,75 kW, IE3 efficiency level for power ≥ 0,75 kW as standard according to EN 60034-30:2009 and EN 60034-30-1:2014.**
- Metric cable gland according to EN 50262.
- PTC included in motors from 30 kW (one per phase, 155°C).
- **Single-phase** version:  
0,37 to 2,2 kW (2-pole)  
220-240 V 50 Hz  
Built-in automatic reset overload protection up to 2,2 kW.
- **Three-phase** version:  
0,37 to 30 kW (2-pole)  
220-240/380-415 V 50 Hz for power up to 3 kW.  
380-415/660-690 V 50 Hz for power above 3 kW.  
Overload protection to be provided by the user.

From 1 July 2021 in accordance with the **Regulations (EU) 2019/1781 and 2021/341**, the three-phase 50 Hz, 60 Hz or 50/60 Hz **surface motors** with **power outputs ranging from 0,12 to 0,749 kW** must have a minimum level **IE2** efficiency; the ones with power outputs ranging **from 0,75 and 1000 kW** must have a minimum level of **IE3** efficiency.

From 1 July 2023, it will be introduced additional requirements.

The following tables also contain the mandatory information pursuant to Annex I, section 2, of the aforementioned Regulations.

## SINGLE-PHASE MOTORS AT 50 Hz, 2 POLES e-SVI (E) SERIES

## e-SVI SERIES PUMPS (ErP 2009/125/EC)

With the **Regulation (EU) N. 547/2012**, the European Commission has established the requirements of ecodesign for some typologies of pumps used for pumping clean water, placed on the market and operated as stand-alone units or as parts of other products.

For vertical multi-stage pumps (MS-V for the Regulations), the requirements refers to:

- just the pump and not the pump and motor assembly (electric or combustion);
- pumps with:
  - a nominal pressure PN not higher than 25 bar (2500 kPa);
  - a speed of 2900 min<sup>-1</sup> (for electric pumps this means 50 Hz 2-pole electric motors);
  - a maximum flow of 100 m<sup>3</sup>/h;
- use with clean water at a temperature ranging from -10°C to 120°C (the test is performed with cold water at a temperature not higher than 40°C).

This regulation states that water pumps shall have index MEI coming from a dedicated formula which considers hydraulic efficiency values at 'best efficiency point' (BEP), 75 % of the flow at BEP (Part load – PL) and 110 % of the flow at BEP (Over load – OL).

The Regulation also establishes the following deadline:

| from                         | minimum efficiency index (MEI) |
|------------------------------|--------------------------------|
| 1 <sup>st</sup> January 2015 | MEI ≥ 0,4                      |

### Regulation (EU) n. 547/2012 – Annex II – point 2 (Product information requirements)

- 1) Minimum efficiency index: see the MEI column in the tables in the *Hydraulic performance* section.
- 2) The benchmark for most efficient water pumps is MEI ≥ 0,70.
- 3) Year of manufacture: see date on rating plate (≥ 2021).
- 4) Manufacturer: Xylem Service Italia Srl - Reg. No 07520560967 - Montecchio Maggiore, Vicenza, Italy.
- 5) Product type: see the PUMP TYPE column in the tables in the *Hydraulic performance* section.
- 6) Hydraulic pump efficiency with trimmed impeller: not applicable to these products.
- 7) Pump performance curves, including the performance curve: see the *Operating Characteristics* graphs in the following pages.
- 8) The efficiency of a pump with a trimmed impeller is usually lower than that of a pump with the full impeller diameter. The trimming of the impeller will adapt the pump to a fixed duty point, leading to reduced energy consumption. The minimum efficiency index (MEI) is based on the full impeller diameter.
- 9) The operation of this water pump with variable duty points may be more efficient and economic when controlled, for example, by the use of a variable speed drive that matches the pump duty to the system.
- 10) Information relevant for disassembly, recycling or disposal at end-of-life: observe the current laws and by-laws governing sorted waste disposal. Consult the product operating manual.
- 11) "Designed for use below – 10 °C only": note not applicable to these products.
- 12) "Designed for use above 120 °C only": note not applicable to these products.
- 13) Specific instructions for pumps as per points 11 and 12: not applicable to these products.
- 14) "Information on benchmark efficiency is available at": [www.europump.org](http://www.europump.org) (Ecodesign section).
- 15) The benchmark efficiency graphs with MEI = 0.7 and MEI = 0.4 are available at [www.europump.org](http://www.europump.org), (Ecodesign, Efficiency charts). Refer to "Multistage Vertical 2900 rpm"

All listed dimensions are with inducer.

e.g. 1SVI10-10 has 10 stages with impeller and 1 inducer chamber.

1svi\_c-2p50-1-en\_a\_td

**1SVI..C - 1SVI..M SERIES (from 2 to 15 stages)**  
**OPERATING CHARACTERISTICS AT 50 Hz, 2 POLES**

These performances are valid for liquids with density  $\rho = 1.0 \text{ Kg/dm}^3$  and kinematic viscosity  $\nu = 1 \text{ mm}^2/\text{sec}$ .

## 1SVI..C - 1SVI..M SERIES (from 17 to 37 stages) DIMENSIONS AND WEIGHTS AT 50 Hz, 2 POLES

## EMPTY STAGES OPERATING CHARACTERISTICS AND DIMENSIONAL DATA

The charts below illustrate the pressure losses to be considered per empty stage when empty stages are used to extend the pump depth.

To calculate the head of a pump with empty stages you can do the calculation as shown below:

### Example:

Pump type: 5SVI06-13; 6 impellers, 13 total stages as per nomenclature at page 9

Flow: 6 m³/h

Head: 33,9 m

The head 33,9 m is read from the performance curve for an 5SVI06-06 pump, see page 43.

The number of empty stages is:

13 total stages - 6 impellers = 7 empty stages

From the pressure loss curve of 5SVI, it appears that the pressure loss of each empty chamber at 6 m³/h is 0,16 m. This result in a total pressure loss of:

Total pressure loss = 0,16 x 7 = 1,12 m

The reduced head of the 5SVI06-13 pump including pressure losses caused by empty stages is:

Head = 33,9 - 1,12 = 32,78 m

In the SVI33,46,66 and 92 electric pumps, empty stages allow the passage of the liquid through a wide opening, eliminating pressure loss in the pump.

## EMPTY STAGES - VERSION WITH COUPLING OPERATING CHARACTERISTICS AND DIMENSIONAL DATA

The immersion depth of e-SVI pump can be varied to meet the required depths of different tanks. The table below illustrates the number of total stages to be used to achieve the required depth. The pump head depends on the number of the impeller used (see head curves on the previous pages of this catalogue)

| NUMBER OF STAGE | IMMERSION DEPTH (mm) |      |      |        |        |        |        |        |        |        |

## EMPTY STAGES - TOTAL WEIGHT CALCULATION

It is possible to calculate the total weight of the pump with empty stages from the weight of the pump with full stages shown in the dimensional tables in this catalog. The table below illustrates for each size the constant weight factor of an empty stage.

| PUMP TYPE | WEIGHT (kg) |
|-----------|-------------|
| 1-3SVI    | 0,20        |
| 5SVI      | 0,24        |
| 10SVI     | 0,57        |
| 15-22SVI  | 0,79        |
| SVI33-46  | 1,35        |
| SVI66-92  | 1,72        |

To calculate the real weight you can perform the calculation as shown below:

Example:

Pump type: 5SVI06-13; 6 impellers, 13 total stages as per nomenclature at page 9

Pump weight: 9 kg

The number of empty stages is:

13 total stages - 6 impellers = 7 empty stages

From the above table for size 5SVI the weight of each empty stage is 0,24 kg.

This results in a total weight due to the empty stages of:

Total weight of empty stages =  $0.24 \times 7 = 1.68$  kg

The total weight of the 5SVI06-13 pump is:

Total weight =  $9 + 1,68 = 10,68$  kg

# **e-SVI WITH VARIABLE FREQUENCY DRIVE**

## **e-SVIH SERIES**

### **e-SVI WITH HYDROVAR**

#### **Background and context**

For all pumping needs in commercial or residential building and in industry applications, the demand for intelligent pumping systems is constantly growing. Controlled systems offer many advantages: reduced operating costs for the lifetime of the pump, lower environmental impact, longer lifetime of piping systems and networks.

For this reason, Lowara has developed the e-SVIH: an intelligent pumping system which assures high level performance with energy consumption tailored to the system's demand.

#### **Benefits of e-SVIH with HYDROVAR**

**Saving:** e-SVIH transforms the e-SVI pumps into variable speed intelligent pumping systems. Thanks to the HYDROVAR, the speed of each pump varies so as to maintain a constant flow, a constant pressure, or a differential pressure. In doing so, at any point in time, the pump only receives the energy required. This in turns allows for considerable savings, especially for systems that have varying loads throughout the day.

**Easy installation and space-saving:** e-SVIH saves time and space during installation. The Hydrovar is delivered already mounted on the motor (for models up to 22kW). The hydrovar is kept cool by the motor fan and does not require a control panel. In order to function, only fuses on the supply line are needed (Check your local electrical installation regulations).

**Standard motors:** e-SVIH models are fitted with three-phase standard TEFC motors with insulation class 155 (F) and IE3 efficiency level from 0,75 to 22 kW.

#### **Key Features of the HYDROVAR**

- **No need for additional pressure sensors:**

The e-SVIH is fitted with a pressure transmitter or differential pressure transmitters, depending on the application. The pressure sensors(s) are pre-wired. For e-SVI with round flanges (S and N versions) the sensors can be installed on the pump flanges.

- **No need for special pumps or motors.**

- **e-SVIH is already pre-wired.**

- **No need for IN LINE filters.**

HYDROVAR already includes the THDi filter embedded as standard.

- **No need for bypass or safety systems:**

The e-SVIH will immediately switch off when demand drops to zero or when it exceeds maximum pump capacity; thus making installation of additional safety devices unnecessary.

- **Anti-condensation device:**

The HYDROVAR is fitted with anti-condensation devices which switch on when the pump is in standby in order to prevent condensation forming in the unit.

## e-SVIH SERIES e-SVI WITH HYDROVAR

The basic function of the HYDROVAR device is to control the pump to meet the system demands.

### HYDROVAR performs these functions by:

- 1) Measuring the system pressure or flow via a transmitter mounted on the pump's delivery side.
- 2) Calculating the motor speed to maintain the correct flow or pressure.
- 3) Sending out a signal to the pump to start the motor, increase speed, decrease speed or stop.
- 4) In the case of multiple pump installations, HYDROVAR will automatically provide for the cyclic changeover of the pumps' starting sequence.

In addition to these basic functions, HYDROVAR can perform controls only manageable by the most advanced computerized control systems. Some examples are:

- Stop the pump(s) at zero demand.
- Stop the pump(s) in case of water failure on the suction side (protection against dry running).
- Stop the pump if the required delivery exceeds the pump's capacity (protection against cavitation caused by excessive demand), or automatically switch on the next pump in a multiple series.
- Protect the pump and motor from over-voltage, under-voltage, overload, and earth fault.
- Vary the pump speed: acceleration and deceleration time.
- Compensate for increased flow resistance at high flow rates.
- Conduct automatic tests at set intervals.
- Monitor the converter and motor operating hours.
- Display the energy consumption (kWh).
- Display all functions on an LCD in different languages (Italian, English, French, German, Spanish, Portuguese, Dutch, etc...).
- Send a signal to a remote control system which is proportional to the pressure and frequency.
- Communicate with external control system via Modbus (RS 485 interface) and Bacnet as standard.

## e-SVIH SERIES HYDROVAR (ErP 2009/125/EC)

From 1 July 2021 in accordance with the new **Regulations (EU) 2019/1781** and **2021/341** the **variance speed drives** with **three-phase input/output current**, rated voltage between **100 V** and **1000 V**, rated for operating with motors included in the same regulation (**0,12- 1000 kW**), must have efficiency level **IE2**.

The tables below also contain the mandatory information pursuant to Annex I, section 4, of the Regulations.

| PN<br>kW | Phase | UNin<br>V | Pa<br>kVA                  | Power losses (PL) with 10 KHz frequency<br>% Pa<br>(% rated speed; % rated torque) |      |      |       |       |       |        |       |        |   | IE   |

## HYDROVAR HVL EMC COMPATIBILITY

### EMC requirements

HYDROVAR fulfills the product standard EN61800-3:2004 + A1:2012, which defines categories (C1 to C4) for device application areas.

Depending on the motor cable length, a classification of HYDROVAR by category (based on EN61800-3) is reported in the following tables:

| HVL           | HYDROVAR classification by categories based on EN61800-3 |
|---------------|--|
| 2.015 ÷ 2.040 | C1 (*)   |
| 3.015 ÷ 3.110 | C2 (*)   |
| 4.015 ÷ 4.220 | C2 (*)   |

(\*) 0,75 motor cable length; contact Xylem for further information

En-Rev\_A

## CARD

### Premium Card HYDROVAR (optional)

For the e-SVIH series, the Premium Card comes fitted as option on the standalone HYDROVAR.

This allows to control up to five fix speed pumps via an external panel.

The Premium Card will allow additional features listed below:

- 2 additional Analog Inputs
- 2 Analog Outputs
- 1 additional digital input
- 5 relays.

## OPTIONAL COMPONENTS

### Sensors

The following sensors are available for HYDROVAR:

- a. Pressure-transducer
- b. Differential pressure-transducer
- c. Temperature-sensor
- d. Flow indicator (orifice plate, inductive flow meter)
- e. Level-sensor.

## HYDROVAR HVL (WALL MOUNTING KIT) DIMENSIONS AND WEIGHTS

As an option a HYDROVAR wall mounting kit is also available. This is used where mounting on the pump unit is impossible or where you would like the controls in another location. These are available for the new generation HYDROVAR HVL 2.015-4.220 (22 kW). The speed of the cooling fan modulates with the HYDROVAR usage which optimizes energy consumption and also reduces noise.

| WM KIT TYPE      | kW   | WM KIT POWER SUPPLY | HVL SIZE | DIMENSIONS (mm) |     |     |      | WEIGHT (kg) |        |
|------------------|------|---------------------|----------|-----------------|-----|-----|------|-------------|--------|
|                  |      |                     |          | A               | H   | L   | P    | HVL         | WM KIT |
| WM KIT HVL 2.015 | 1,5  | 1~ 230V             | A        | 220             | 170 | 202 | 232  | 5,6         | 2,6    |
| WM KIT HVL 2.022 | 2,2  |                     |          | 220             | 170 | 202 | 232  | 5,6         | 2,6    |
| WM KIT HVL 2.030 | 3    |                     | B        | 240             | 175 | 258 | 290  | 10,5        | 8,2    |

## e-SVIE SERIES e-SVI SMART

### Background and context

In every sector, from construction and industry to agriculture and building services the need for intelligent, compact and high-efficiency pumping systems is constantly growing.

That's why Lowara has developed the e-SVI Smart series: an integrated intelligent pumping system with electronically driven, permanent magnet motor (IE5 efficiency level).

The integrated control system, combined with the high performance, power and efficiency from the motor and hydraulics, guarantees impressively low operating costs. You also benefit from flexibility, precision and its ultra-compact size.

### Savings

The electronics and permanent magnet motor are highly efficient and minimize power losses while transferring maximum energy to the hydraulic parts of the pump.

The refined control system with integrated microprocessor adjusts the motor speed, matching the required operating point of the pump or system requirements.

This reduces demand on electricity according to the required working conditions.

This creates economies, especially in systems where pump demand varies over time.

### Flexibility

The compact size, low loss and increased control make the e-SVI Smart series a good choice in applications and systems where fixed speed pumps are commonly used. The e-SVI Smart series is easy to integrate in control and regulation loops thanks to the wide availability of compatible communication protocols, including analog and digital inputs.

The pump is supplied with a pressure sensor.

### Ease of use and commissioning

e-SVI Smart has an intuitive interface that guides the user through the installation, and a practical area to assist with connections.

The control system is integrated and no additional external electrical panel is required.

### Application sectors

- Water supply systems in residential buildings
- Air conditioning
- Water treatment plants
- Industrial installations

### e-SM system

- Single-phase power supply: 208-240V +/- 10%, 50/60 Hz
- Three-phase power supply:
  - from 0,37kW to 1,5kW: 208-240/380-460V +/- 10%, 50/60 Hz
  - 2,2kW: 380-460V +/- 10%, 50/60 Hz
- Power up to 2,2kW
- Protection class IP 55
- Can be linked up to 3 e-SVI Smart pumps

### Pump

- Flow rate: up to 30 m<sup>3</sup>/h
- Head: up to 235 m
- Maximum operating pressure 25 bar (PN 25)
- The hydraulic performances meet the tolerances specified in ISO 9906:2012.
- Environment temperature: -20° C to +50° C with no performance derating

### Motor

- IE5 efficiency level (IEC TS 60034-30-2:2016)
- Synchronous electric motor with permanent magnets, (TEFC), closed structure, air-cooled
- Insulation class 155 (F)
- Overload protection and locked rotor with automatic reset incorporated

### Regulations (EU) 2019/1781 e 2021/341

#### Annex I – point 4 (Product information)

The requirements shall not apply to these variable speed drives, as they are integrated to permanent magnet motors, that aren't covered by the same regulations.

## e-SVIE SERIES e-SVI SMART

e-SVI Smart series is equipped with an intelligent control that optimizes hydraulic performance while minimizing waste.

**Integrated intelligence:** The electronic control of the motor enables a 20% increase in performance compared to an equivalent fixed speed pump (area highlighted in figure "Integrated intelligence").

**Adjustment:** This is possible both at constant pressure and according to the characteristic curve of the system, based on the customer's preferences.

Another option is according to an external signal or at a preset speed.

**Intuitive and simple interface:** You can control the unit from just three buttons, with an easy to read display for parameters and alarms, designed for complete control of system operation.

- ① Communication LED
- ② Power on LED
- ③ Unit of measure LED
- ④ Speed LED bar
- ⑤ Status LED
- ⑥ Numeric display
- ⑦  Decrease key
- ⑧  On/off and menu key
- ⑨  Increase key

MorsT-en\_a\_sc

**e-SVIE SERIES  
HOW TO READ SMART PUMP SERIES CURVES**

To exploit to the maximum potential of Smart Pumps it's important to properly read working curves:

① **Pump model**

② **Maximum speed curve:** equal to 3600 rpm

③ **Minimum speed curve:** it refers to the minimum rpm level the motor can work at, it's calculated depending on the model of pump maximizing for each one the working area and allowing the highest system flexibility.

④ The **area with dotted lines** is where the pump can only operate intermittently for short periods of time.

⑤ Each **intermediate curve** between max and min speed shows the percentage of load the pump+motor+drive system is working at; it's easy to read also from the LED speed bar on the HMI keypad: at 90% there will be 9 led, at 80% there will be 8 and so on.

Example: at 60% there will be 6 lit leds

⑥ The **part load percentage** is calculated depending on maximum speed (*max*, 100%) and minimum speed (*min*, equal to 0%, which is the minimum part load step, below it the drive stays powered up but cannot work).

⑦ **NPSH**: is the net positive suction head of pump+motor+drive system working at maximum speed.

⑧ **P1<sub>gr</sub>** is the power absorption in kW of pump+motor+drive system working at maximum speed.

⑨ **Load control**: the Smart Pump controls and limits power consumption at high flow/low head, in this way the motor stays protected from overload and ensure a longer life of pump+motor+drive system.

⑩  $\eta_{gr}$  is the efficiency of pump+motor+drive system working at maximum speed.

⑪  $\eta_p$  is the efficiency of the hydraulic part, working at maximum speed.

⑫ **Working point**: it's important to make sure the pump is working at the best working point, the one at highest efficiency.

It's easy to find it: it's the highest point of the hp pump efficiency curve; once you found it, you can learn also flow values from x-axis called Q and head values from y-axis called H which allow the system to work at the best working point.

\* Maximum value in specified range: P<sub>1</sub> = input power; I = input current.

1-22svie-esm-2p50T-en\_a\_th

## e-SVIE SERIES ELECTRICAL DATA TABLE

In the range 3000-3600 rpm the nominal motor power is guaranteed. Above 3600 rpm it isn't possible work and the motor is automatically limited; below 3000 rpm it works partially load.

# **TECHNICAL APPENDIX**

## NPSH

The minimum operating values that can be reached at the pump suction end are limited by the onset of cavitation.

Cavitation is the formation of vapour-filled cavities within liquids where the pressure is locally reduced to a critical value, or where the local pressure is equal to, or just below the vapour pressure of the liquid.

The vapour-filled cavities flow with the current and when they reach a higher pressure area the vapour contained in the cavities condenses. The cavities collide, generating pressure waves that are transmitted to the walls. These, being subjected to stress cycles, gradually become deformed and yield due to fatigue. This phenomenon, characterized by a metallic noise produced by the hammering on the pipe walls, is called incipient cavitation.

The damage caused by cavitation may be magnified by electrochemical corrosion and a local rise in temperature due to the plastic deformation of the walls. The materials that offer the highest resistance to heat and corrosion are alloy steels, especially austenitic steel. The conditions that trigger cavitation may be assessed by calculating the total net suction head, referred to in technical literature with the acronym NPSH (Net Positive Suction Head).

The NPSH represents the total energy (expressed in m.) of the liquid measured at suction under conditions of incipient cavitation, excluding the vapour pressure (expressed in m.) that the liquid has at the pump inlet.

To find the static height  $h_z$  at which to install the machine under safe conditions, the following formula must be verified:

$$h_p + h_z \geq (NPSH_r + 0.5) + h_f + h_{pv} \quad \textcircled{1}$$

where:

**$h_p$**  is the absolute pressure applied to the free liquid surface in the suction tank, expressed in m. of liquid;  $h_p$  is the quotient between the barometric pressure and the specific weight of the liquid.

**$h_z$**  is the suction lift between the pump axis and the free liquid surface in the suction tank, expressed in m.;  $h_z$  is negative when the liquid level is lower than the pump axis.

**$h_f$**  is the flow resistance in the suction line and its accessories, such as: fittings, foot valve, gate valve, elbows, etc.

**$h_{pv}$**  is the vapour pressure of the liquid at the operating temperature, expressed in m. of liquid.  $h_{pv}$  is the quotient between the  $P_v$  vapour pressure and the liquid's specific weight.

**0,5** is the safety factor.

The maximum possible suction head for installation depends on the value of the atmospheric pressure (i.e. the elevation above sea level at which the pump is installed) and the temperature of the liquid.

To help the user, with reference to water temperature (4° C) and to the elevation above sea level, the following tables show the drop in hydraulic pressure head in relation to the elevation above sea level, and the suction loss in relation to temperature.

| Water temperature (°C) | 20  | 40  | 60  | 80  | 90  | 110  | 120  |
|------------------------|-----|-----|-----|-----|-----|------|------|
| Suction loss (m)       | 0,2 | 0,7 | 2,0 | 5,0 | 7,4 | 15,4 | 21,5 |

| Elevation above sea level (m) | 500  | 1000 | 1500 | 2000 | 2500 | 3000 |
|-------------------------------|------|------|------|------|------|------|
| Suction loss (m)              | 0,55 | 1,1  | 1,65 | 2,2  | 2,75 | 3,3  |

Friction loss is shown in the tables of this catalogue. To reduce it to a minimum, especially in cases of high suction head (over 4-5 m.) or within the operating limits with high flow rates, we recommend using a suction line having a larger diameter than that of the pump's suction port.

It is always a good idea to position the pump as close as possible to the liquid to be pumped.

Make the following calculation:

Liquid: water at ~15°C  $\gamma = 1 \text{ kg/dm}^3$

Flow rate required: 25 m<sup>3</sup>/h

Head for required delivery: 70 m.

Suction lift: 3,5 m.

The selection is an 33SV3G075T pump whose NPSH required value is, at 25 m<sup>3</sup>/h, of 2 m.

For water at 15 °C

$$h_p = P_a / \gamma = 10,33\text{m}, h_{pv} = P_v / \gamma = 0,174\text{m} (0,01701 \text{ bar})$$

The  $H_f$  flow resistance in the suction line with foot valves is ~ 1,2 m.

By substituting the parameters in formula  $\textcircled{1}$  with the numeric values above, we have:

$$10,33 + (-3,5) \geq (2 + 0,5) + 1,2 + 0,17$$

from which we have: 6,8 > 3,9

The relation is therefore verified.

**VAPOUR PRESSURE**

## FLOW RESISTANCE

### TABLE OF FLOW RESISTANCE IN BENDS, VALVES AND GATES

The flow resistance is calculated using the equivalent pipeline length method according to the table below:

| ACCESSORY<br>TYPE  | DN                             |     |     |     |     |     |     |     |     |     |      |      |
|--------------------|--------------------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|------|------|
|                    | 25                             | 32  | 40  | 50  | 65  | 80  | 100 | 125 | 150 | 200 | 250  | 300  |
|                    | Equivalent pipeline length (m) |     |     |     |     |     |     |     |     |     |      |      |
| 45° bend           | 0,2                            | 0,2 | 0,4 | 0,4 | 0,6 | 0,6 | 0,9 | 1,1 | 1,5 | 1,9 | 2,4  | 2,8  |
| 90° bend           | 0,4                            | 0,6 | 0,9 | 1,1 | 1,3 | 1,5 | 2,1 | 2,6 | 3,0 | 3,9 | 4,7  | 5,8  |
| 90° smooth bend    | 0,4                            | 0,4 | 0,4 | 0,6 | 0,9 | 1,1 | 1,3 | 1,7 | 1,9 | 2,8 | 3,4  | 3,9  |
| Union tee or cross | 1,1                            | 1,3 | 1,7 | 2,1 | 2,6 | 3,2 | 4,3 | 5,3 | 6,4 | 7,5 | 10,7 | 12,8 |
| Gate valve         | -                              | -   | -   | 0,2 | 0,2 | 0,2 | 0,4 | 0,4 | 0,6 | 0,9 | 1,1  | 1,3  |
| Foot check valve   | 1,1                            | 1,5 | 1,9 | 2,4 | 3,0 | 3,4 | 4,7 | 5,9 | 7,4 | 9,6 | 11,8 | 13,9 |
| Non return valve   | 1,1                            | 1,5 | 1,9 | 2,4 | 3,0 | 3,4 | 4,7 | 5,9 | 7,4 | 9,6 | 11,8 | 13,9 |

G-a-pcv-en\_b\_th

The table is valid for the Hazen Williams coefficient  $C=100$  (cast iron pipework);

for steel pipework, multiply the values by 1,41;

for stainless steel, copper and coated cast iron pipework, multiply the values by 1,85;

When the **equivalent pipeline length** has been determined, the flow resistance is obtained from the table of flow resistance.

The values given are guideline values which are bound to vary slightly according to the model, especially for gate valves and non-return valves, for which it is a good idea to check the values supplied by manufacturers.

## VOLUMETRIC CAPACITY

**FURTHER PRODUCT SELECTION  
AND DOCUMENTATION**  
**Xylect**

Xylect is pump solution selection software with an extensive online database of product information across the entire Lowara range of pumps and related products, with multiple search options and helpful project management facilities. The system holds up-to-date product information on thousands of products and accessories.

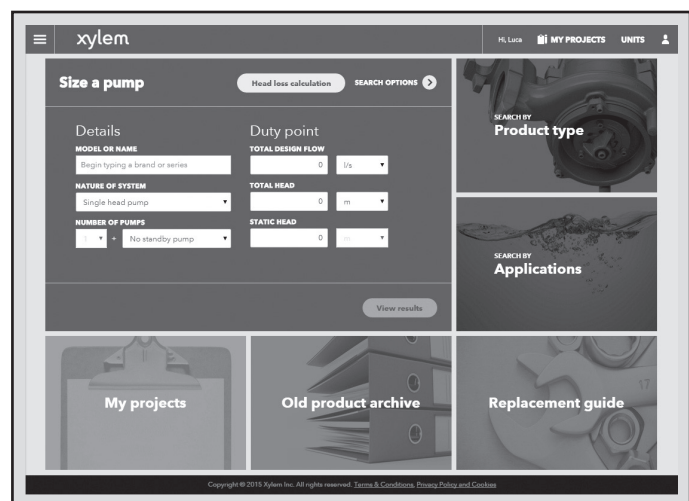

The possibility to search by applications and the detailed information output given makes it easy to make the optimal selection without having detailed knowledge about the Lowara products.

The search can be made by:

- Application
- Product type
- Duty point

Xylect gives a detailed output:

- List with search results
- Performance curves (flow, head, power, efficiency, NPSH)
- Motor data
- Dimensional drawings
- Options
- Data sheet printouts
- Document downloads incl dxf files

*The search by application guides users not familiar with the product range to the right choice.*

**FURTHER PRODUCT SELECTION  
AND DOCUMENTATION  
Xylect**

The detailed output makes it easy to select the optimal pump from the given alternatives.

The best way to work with Xylect is to create a personal account. This makes it possible to:

- Set own standard units
- Create and save projects
- Share projects with other Xylect users

Every registered user has a proper space, where all projects are saved.

For more information about Xylect please contact our sales network or visit [www.xylect.com](http://www.xylect.com).

Dimensional drawings appear on the screen and can be downloaded in dxf format.

# Xylem |'zīləm|

- 1) The tissue in plants that brings water upward from the roots;
- 2) a leading global water technology company.

We're a global team unified in a common purpose: creating advanced technology solutions to the world's water challenges. Developing new technologies that will improve the way water is used, conserved, and re-used in the future is central to our work. Our products and services move, treat, analyze, monitor and return water to the environment, in public utility, industrial, residential and commercial building services settings. Xylem also provides a leading portfolio of smart metering, network technologies and advanced analytics solutions for water, electric and gas utilities. In more than 150 countries, we have strong, long-standing relationships with customers who know us for our powerful combination of leading product brands and applications expertise with a strong focus on developing comprehensive, sustainable solutions.
